#terraform init
#terraform validate
#terraform plan
#terraform apply
#terraform destroy
```

general commands

get the terraform version terraform version

download and update root modules terraform get -update=true

open up a terraform interactive terminal terraform console

create a dot diagram of terraform dependencies
terraform graph | dot -Tpng > graph.png

format terraform code to HCL standards

validate terraform code syntax terraform validate

enable tab auto-completion in the terminal terraform -install-autocomplete

show infromation about provider requirements terraform providers

login and logout of terraform cloud terraform login and terraform logout

workspaces

list the available workspaces terraform workspace list

create a new workspace raform workspace new development

select an existing workspace terraform workspace select default

initilize terraform

initialize terraform in the current working directory terraform init

skip plugin installation

terraform init -get-plugins=false

force plugin installation from a directory terraform init -plugin-dir=PATH

upgrade modules and plugins at initilization terraform init -upgrad

update backend configuration terraform init -migrate-state -force-copy

skip backend configuration
terraform init -backend=false

use a local backend configuration terraform init -backend-config=FILE

change state lock timeout (default is zero seconds) terraform init -lock-timeout=120s

plan terraform

produce a plan with diff between code and state terraform plan

output a plan file for reference during apply terraform plan -out current.tfpla

output a plan to show effect of terraform destroy terraform plan -destroy

target a specific resource for deployment raform plan -target=ADDRES:

note that the -target option is also available for the terraform apply and terraform destroy commands

outputs

list available outputs terraform output

output a specific value terraform output NAME

apply terraform

apply the current state of terraform code terraform apply

specify a previously generated plan to apply terraform apply current.tfplan

enable auto-approval or automation terraform apply -auto-approve

destroy terraform

destroy resources managed by terraform state terraform destroy

enable auto-approval or automation terraform destroy -auto-approve

manage terraform state

list all resources in terraform state terraform state list

show details about a specific resource terraform state show ADDRESS

track an existing resource in state under new name terraform state mv SOURCE DESTINATION

import a manually created resource into state terraform state import ADDRESS ID

pull state and save to a local file
terraform state pull > terraform.tfstate

push state to a remote location terraform state push PATH

replace a resource provider terraform state replace-provider A B

taint a resource to force redeployment on apply terraform taint ADDRESS

untaint a prevolusly tainted resource terraform untaint ADDRESS

Version 1
